

Zero-Emission Tains: Rail Electrification

Mr. Marko Kroenke, President, International Monorail Association,
Canada

Onsite Presentation

Railways are a highly sustainable mode of public transport. To further enhance their sustainability, the industry is exploring alternatives to diesel trains, such as zero-emission trains powered by batteries, hydrogen or electricity. This workshop will address the options and challenges associated with transitioning to zero-emission trains.

The challenges are made clear by taking an example of the struggles when writing a tender for zero emission trains.
